

SYMPHONY BAMBOO BENCH

Assembly Manual and Care

CARE

This bench has been varnished. Over time, the varnish will fail and the bamboo color will fade. To maintain the initial color, varnish once or twice a year with UV protected Outdoor Varnish. Should you prefer a natural look, the bamboo will weather and turn a silver grey color, looking quite dark when wet.

ASSEMBLY INSTRUCTIONS

This bamboo bench is hand made by highly skilled craftsmen who have passed down the knowhow for generations. As a result, no two benches are exactly the same. Each part to be assembled was fit and assembled before shipping.

1. Bolt one side in place.. Remove the back part from the box and the two sides. Note that the back is slightly bent so it leans away from the seat. The first task is to determine which side is the left and which is the right. Try lining a side piece up with the back and check if the bolt holes line up. If not, try it on the other side. When the correct side is found, insert the bolts and tighten hand tight. Do not overtighten as this will crack the bamboo.

2. Insert seat. Place the seat on the installed side piece. Note again that the seat can be installed two different ways. Check the alignment of the holes each way and chose the best fit. Now install the other end piece so that the seat is captured between the two sides. Bolt the remaining side in place.

3. Wire the seat in place. A wire loop is attached to the ends of the seat. Unhook the wire and feed it through the holes in the seat end and side panel. Twist the wire until snug. Do not over tighten as this will crack the bamboo.

Bolt back and side together

Wire seat to side section. Put the wire through the holes and twist
